

Here Is The Free Type II Diabetes Guide You Requested

“DIABETIC IGNORANCE: *How Drug Companies, The Food Industry, and Some Doctors SET YOU UP for Failure”*

Inside This Diabetes Guide You’ll Discover...

- ↳ Why Your Current Method Of Treatment May Be Dangerous To Your Health!
- ↳ How To Determine If You Are Doing Everything Possible To Better Your Health!
- ↳ The Most Common Reasons Why Your Diabetes May Get Worse With Time Not Better Despite Drug Therapy!
- ↳ How To Tell The Drug Companies Thanks, But NO THANKS!

And much more!

Dear Type II Diabetes Sufferer,

If you are reading this guide then there is a good chance that you or a loved one has been stricken and is *suffering* with Type II Diabetes. This may be the one thing you read about your disease that may change your life forever. I am about to **reveal SHOCKING information...** that puts me in hot water with the powers that be.

As a doctor, however, I have to put it all on the line... Lives are at stake!! Your life is at stake!! If I don’t speak up then who will? If I don’t speak up then the drug companies and the “medical machine” will continue to suck you dry.

You have either just been diagnosed with Type II Diabetes or you have been living with it for some time now. In either case the *clock is ticking* and your disease may continue to progress if you don’t have the right information...Much of that information will be found in the guide you now hold in your hands.

Read As Though Your Life Depends On It!

You are one of millions of Americans suffering with diabetes. *You are not alone.* This is a terrible disease that has reached epidemic proportions with no end in sight. It is also, in my opinion, one of the **most mismanaged diseases** going today.

Many diabetics, maybe even you, lay awake at night wondering how much time they have until the effects of the disease start to take its toll on their body and life (if they haven't already).

Wondering about:

- ↳ Your eye sight
- ↳ Your heart health
- ↳ Your kidneys
- ↳ Loss of your limbs
- ↳ Your family
- ↳ Your risk factors for cancer
- ↳ Your risk factors for stroke
- ↳ Whether or not this disease will cut your life short

The bad news is... You are right to *worry and wonder* because once you are stricken with this disease many of these complications can become a reality. **Unless you take massive action.** Unless you *take-the-bull-by-the-horns* and do something about it.

Your diabetes doesn't have to be a **death sentence.** The information I will reveal to you in this guide will likely shock and anger you. When you are done you will be wondering why your doctor never revealed this information to you before. Many clients who have gone through this program have often wondered... "why didn't someone do this for me decades ago?"

What You Discover In This Guide May Change Your Life Forever...

First things first. Before we go any further, I want you to do me a favor...promise you will read this entire guide, word for word, at least twice. Why twice? Well, because there is valuable information that can possibly give you your life back – I just want to make sure you “get it all” and don't miss anything. After you read it twice, don't throw it out...give it to someone else suffering from type II diabetes. I want you to feel the incredible connection and inner fulfillment I do, when I give you this information and unlock the *“diabetic ankle chains”* that have stolen and IS stealing so much of your life.

This guide will quite possibly answer all the questions you have ever had about this disease. This guide could be the *cure-all* for all the frustration you have had since you were diagnosed.

Putting This Guide Aside Could Cost You A Healthy, Happy Life, And Cause You To Be On The Drug Companies Customer-For-Life-Plan

If you've been desperately searching for answers...REAL and HONEST answers as to **why you have type II diabetes** and HOW you can begin the process of reversing it. If you're sick and tired of listening to the so called "experts" who continue to pump more drugs and insulin into your body which leave you no better. If you want to FINALLY get your life back...then reading this entire guide *RIGHT NOW* may prove to be the biggest, most important decision you've made in a long time.

If you have just recently been diagnosed with type II diabetes or have been suffering with it for years, if you worry about playing with and being there for your children or grandchildren, keeping your job, enjoying your retirement years, or becoming a burden to those around you... **you need to read this guide...ALL OF IT.**

Do NOT put this off or you will, in my opinion, be neglecting your health. You might *kick yourself* later as you realize reading and following this simple guide was the help you've been praying for since diabetes virtually changed everything about your life.

After reading the next 15 pages, you will feel that giant weight being lifted off your chest as you get the possible answers and solutions to that huge, debilitating life altering weight that cripples your enthusiasm for life, strains your relationships, and causes you concern for your life down the road.

You know that weight I'm talking about – the *weight of the disease* that causes you to **take diabetic drugs, inject yourself with insulin, take high blood pressure medications, and cholesterol lowering drugs** – the one that causes you to check your blood sugar several times per day (only to be frustrated by the obvious signs that your treatment is not working), the one that robs you of your energy so you no longer have the will to participate as you once did in life.

I'm here to tell you it does NOT have to be this way... it does NOT have to be a struggle anymore.

**YOU CAN REVERSE YOUR TYPE II DIABETES, REGARDLESS
OF WHAT YOU HAVE TRIED IN THE PAST.**

**YOU CAN CONTROL AND NORMALIZE YOUR BLOOD SUGAR
WITHOUT MAKING THE DRUG COMPANIES ANY
RICHER THAN THEY ALREADY ARE.**

How is that possible you may be asking? It sounds too good to be true... I thought I had tried everything...I am doing everything I am being asked to do...What else could there be?

Well I am fairly certain that you have not exhausted all options and probably have not even tried the best options for your condition. It's not about the luck of the draw. It's about asking the right questions. Running ALL the right tests. Gaining knowledge about your condition that can end the frustration and confusion.

Knowledge That You More Than Likely Don't Have

Knowledge That Could Change Your Life Forever!

Imagine how life would be if you no longer needed the drugs...

Imagine how life would be if you no longer had to inject yourself with insulin...

Imagine if you had the energy to do the things that once made you truly happy...

Imagine what life would be like if you could control your blood sugar without medication and insulin...

Imagine what life would be like without living in constant fear of the devastating effects of this disease...

Well, stop imagining... **The information you very well may need is here!!!**

Hi, my name is Dr. Dale Kelly, DC, CFMP, DPSc. and I am about to reveal to you what I believe is the **ULTIMATE MISSING LINK, a program that has shown to be able to REVERSE type II diabetes with AMAZING success.**

Why would I offer this free guide and reveal all of this to you...a complete stranger?

Well first because I care about the members of my community. I could not live with myself knowing I did not do everything in my power to get this program into the hands of as many diabetics as humanly possible. I have an obligation to you as a doctor to reach out and show you the way to reverse your diabetes, *prove your doctor and the drug companies wrong.*

Many doctors and certainly the drug companies think that diabetics have no other choice but to take potentially dangerous and side-effect laden drugs. That this disease is a life-long disease where the best we can hope for is to slow down the inevitable side effects of the disease. **THIS IS NOT TRUE! KEEP READING...**

I also know just how crippling diabetes can be. I know how diabetes changes the life of diabetics for the worst. I know how diabetes can put a strangle hold on a diabetic's life... squeezing every hope and dream out of existence.

How could I know how YOU feel?

Well, I help type II diabetics EVERY DAY. You see a large part of my practice is devoted to helping clients just like you. Devoted to a disease that in my opinion is *grossly mismanaged*. Devoted to a disease, and those who suffer from it, that takes so many lives unnecessarily every year.

Is There A “Cure” For Type II Diabetes?

This is really the wrong question to ask...I don't really concern myself about “curing” type II diabetes...I don't really care about the diagnosis of type II diabetes...This type of thinking and philosophy has gotten us where we are today with respect to health in this country (which is pretty much at the bottom of the barrel).

Our health care system diagnoses the disease and then often prescribes treatment based on the diagnosis, without asking more *critical questions*. The net effect of that is often treatment with **drugs that don't address the root issues** for each individual. In other words many diabetics are treated like just another member of the “diabetic herd”, and not like individuals.

Doctor's have become so concerned about finding a cure that they often forget how to think...how to think about what could be going wrong with the body at a physiological and biochemical level. How to work to restore function instead of giving up and using drugs to **“bully the physiology of the body.”** It is as if they are no longer permitted to think. Today's doctor must follow the “standard of care.” The term “standard of care” seems like a good term. But, *what does it mean?*

Well the standard of care is...if you are diagnosed as a type II diabetic (generally on a random office visit) then you get one or multiple diabetic drugs, you are told to change your diet, lose weight, and exercise. (**By the way your weight does not have much to do with your diabetes. It is not the cause of it and is certainly not the cure for it.**) The standard of care means that if you went to another doctor with the diagnosis they would recommend basically the same thing.

This is generally the extent to which diabetics are counseled on day one, DIAGNOSIS DAY. Sadly, many diabetics guide that is the extent to which they are counseled for the rest of their life. And so it goes that many diabetics are pushed into a one-drug-after-another system that **often promotes the very disease it attempts to treat**. Many diabetics spend the rest of their life in this system never knowing there is another way that is often safer and more effective.

Without even meeting you I am fairly certain I know what drugs you are taking. *How do I know this?* Because most type II diabetics get basically the same treatment...the same drugs. Now the drugs may be named differently, but they generally have the same mode of action, they are just **marketed by a different “drug company.”** This is what is meant by standard of care.

So if you give a group of people who only have in common the label of a disease (diagnosis) the same basic treatment plan...what do you expect the results to be? That is correct...you would expect to get the same basic results...and the pharmaceutical companies record for diabetic results has shown to be unsatisfactory (to say the least), in my opinion.

Diagnosing diabetes is actually very easy to do...It certainly is not “rocket-science.”

The ultimate question is *what has caused your type II diabetes*...As a doctor when you remember how to think...remember how the body works, you begin to ask far more critical questions than...“is there one pill that can cure one disease?”

Asking the right questions has led me to make some interesting discoveries about type II diabetes.

And What I’ve Discovered Is Like The “Fountain Of Youth” For Diabetic Sufferers!

You read that right. What I’ve discovered has shown to be the equivalent of stumbling across the fountain of youth for many diabetics. And I’m gonna share it all with you. All of it.

Here’s what this is all about: I was your average doctor and knew only the basics about type II diabetes. I had seen quite a number of cases in my practice only to refer them out to the so - called “diabetic experts.” Only to find that the patients who were walking out of my office were going down a *dark and miserable path*. Watching my patients deteriorate right before my eyes even though they were following everything the “diabetic expert” told them to do was really tough.

I have seen way too many doctors just put their diabetic patients on the *standard cocktail of drugs and insulin* therapy and leave them to their own devices. Many of those diabetic drugs are just treating the symptom of high blood sugar, while the disease continues to progress to the **ultimate reality of insulin therapy**. When this reality hits and your doctor says “well I think we need to start giving you insulin to control your blood sugar” you are in big trouble...a world of hurt.

Why The Eventual Prescription Of Insulin Therapy May Prove To Be Your Ultimate Downfall

You must engrain into your brain the following statement...

High levels of insulin floating around in your body is potentially dangerous to your health and ultimately to your life!!

You see more than likely it's not that your body is lacking the hormone insulin. **The problem for the majority of type II diabetics is that they are resistant to insulin...**this basically means that your body has lost the ability to utilize insulin properly.

What sense does it make to give someone who is insulin resistant MORE INSULIN?

Especially when that substance (insulin) may be harmful to your health.

Insulin at high levels:

- ↳ May cause you to age prematurely shortening your life expectancy.
- ↳ May cause you to gain weight at an alarming rate.
- ↳ May cause more insulin resistance.
- ↳ May cause your blood pressure to increase.
- ↳ May cause cardio-vascular disease.
- ↳ May increase your risks to develop cancer and kidney disease.

And that's just a short list...

****Insulin therapy often promotes the very disease it attempts to treat.**** When you give a person who is insulin resistant more insulin (I know it just sounds illogical) you run the risk of promoting more insulin resistance. So the treatment can perpetuate the very disease it aims to treat. Patients experience this through the years by having to use more and more insulin to get the same effect. **GOOD LUCK WITH THAT REGIMEN!**

Insulin is also a fat storing hormone. *It promotes weight gain.* So here you are getting weight loss recommendations from your health care provider and at the same time you are being recommended a hormone that promotes weight gain. **INSANITY!**

Increased insulin in the body increases risk for cardio-vascular disease. The biggest and

most deadly complication with diabetes is cardio-vascular disease. **So go figure.**

The goal is to control the blood sugar no matter what. And when other symptoms are problems arise diabetics often just get another drug to “deal” with that new symptom or problem. No wonder the pharmaceutical industry is a MULTI-TRILLION dollar business. But...how is their “*business model*” working for you?

You deserve more!!! It’s like the “health care system” has just given up on you and forgotten that you are a human being not just an “ATM MACHINE” it uses to stimulate the economy. With trillions of dollars spent on health care (mostly your money) every year you deserve to have better options. You deserve to have better results. You deserve to be able to live a normal life. One that is free from drugs and the destruction that diabetes can create.

YOU DESERVE THE TRUTH ABOUT TYPE II DIABETES!

But before I get to the truth let me take a minute to address a *very delicate subject*. Sure there are a lot of people to blame for the DISASTER of diabetes in this country. YOU can surely lay the blame on a lot of people about how YOUR diabetes has been treated up to this point.

- The Pharmaceutical Companies
- The Medical Schools
- The Food Industry
- The Insurance Companies
- Your Genetics

But with any problem we should always look in the mirror first. We must take responsibility for what is happening to our health. If we don’t then we just become slaves to industry. The Pharmaceutical Companies, the mainstream “drug therapy” model, and health insurance companies are able to bat ENORMOUS SOMES OF MONEY back and forth in large part because we as patients let them.

When you fail to educate yourself and take responsibility someone or something can easily offer you an easy “solution” that may be no solution at all. In fact that solution can make you a slave to their product for a lifetime. Taking responsibility for YOUR diabetes does not lay the blame on you, but rather gives you the **power to do something about it**.

Here is the thing...Even if you got really motivated and told your doctor that you would be willing to do anything to reverse your diabetes and health condition, many prescribing doctors would tell you that it is not possible to reverse your diabetes. They might say that the best you can do is to take your “medicine” to try to slow down the inevitable progression of this disease.

If you get one thing out of this guide...GET THIS!

Type II Diabetes Can ABSOLUTELY Be Reversed

No one can tell me that it can't because we see it happen in health care everyday. Type II diabetics being able to...

- Walk away from prescription drugs and insulin
- Lose weight without exercise
- Increase their energy levels
- Improve their quality of life
- Make it to a point where they are Non-Diabetic

You see most diabetics have seen the **devastation of diabetes** occur in a loved one or someone very close to them. They have seen their mothers, fathers, siblings, etc. suffer with heart disease, require amputations, lose their vision, or live their final days in a dialysis unit.

And if they take a step back and look at their own situation they can see that they are on the very same track. *One-drug-after-another*, continual weight gain, perpetual decline in quality of life, etc...because of this many **diabetics are deep down inside fearful** of what they are marching towards. One patient called it the DIABETIC DEATH MARCH. YIKES!

It's not that diabetes can just cut your life short, snuff it out before you are really meant to go...but, if you are "lucky" enough to squeeze a few more years out of your life they are often some of the most miserable and dependent years you have ever lived.

If you REALLY want to rid your body of the disease and devastating risks of diabetes and start living a normal life then you need to first be aware of...

Six Diabetic Treatment Misconceptions:

1. Type II Diabetes Is Genetic

Could you have been born with a genetic fate to develop type II diabetes? Maybe. However, this is just one factor. Your genetic predisposition or your "genotype" is just one factor in your future health profile...it is not the only one. You can certainly have the genetic potential to develop type II diabetes, but other factors such as lifestyle choices, diet, exercise, ability to handle stress, etc. will determine whether or not you express that genetic potential. Science now calls this EPIGENETICS.

This incomplete and short sided understanding of the role of genetics has led the "health care system" to have a "**give up attitude**" towards the treatment of type II diabetes. "You're mother and father have diabetes so it's no surprise that you now have it." This point of view is extremely dangerous because it limits your possibilities for treatment and healing.

We now know that even though you might have this genetic potential...the expression of that potential can be altered and changed for the better. **This is called epigenetic modulation.**

2. Type II Diabetes Is Irreversible

It's a death sentence of sorts...There is nothing that can be done short of managing the symptoms and complications of diabetes. Diabetes is looked at as a chronic and degenerative disease that will always be there and will always get worse with time.

The people who believe it to be irreversible have quite possibly given up on you (I HAVE NOT)... They have forgotten the innate wisdom of the body...that the body can and does heal itself if given the right tools and circumstances. It can even heal itself from type II diabetes.

This point of view commonly leads doctors to continually prescribe expensive and dangerous *diabetic drugs* that can actually make the disease worse and make you sicker...Not to mention all the high blood pressure and cholesterol lowering drugs...and when those all fail they will **bombard your body with increasing levels of insulin** just for the sake of being able to say they controlled your blood sugar.

3. Prescription Drugs Are The “Cure All” For Diabetes

If that were the case we would have found a “cure” by now. With all the money spent on diabetes “research” and drug therapy you would think you would be completely healed of diabetes by now. One thing is for sure we do not have a shortage of drugs in the U.S.

One of the things that angers me and maybe you have had the same experience... Your doctor gives you a diagnosis of type II diabetes... *gives you a prescription*... tells you to change your diet and exercise then is gone in a flash on to the next patient.

Clients commonly complain to me that their doctor did not spend the time with them and give them specifics on what they should do to change their lifestyle. They complain that they got some general information...information that often left them even more confused.

Many diabetics feel like they have to figure it out on their own.

Sure you could do your research on the internet or read a book on the latest fad diet, but do you know how much conflicting dietary information is out there. GOOD LUCK trying to wade through all that information.

You need a doctor who can bring it all together for you. One that will take the time and run all the necessary tests to figure out how you got this way in the first place.

4. All Doctors Know How To Treat Type II Diabetes

Many diabetics go from one-doctor-to-the next thinking at some point they will find the right doctor who will have *the magic protocol*. Sadly, the U.S. health care system is DOMINATED by what has been called a “drug therapy model.” This “drug therapy” model has become the standard of care.

Expecting a different approach from a prescribing doctor often only leads to disappointment. **That’s why I wrote this guide – to help type II diabetic sufferers just like you.**

Before we go any further, let me stress to you that there is a place for medication, but more importantly, the cause of the problem must be identified because an *incomplete diagnosis = an incomplete treatment, and an incomplete treatment often leads to an incomplete human being.*

And, if your medication fails you’ll probably get even stronger medications where the side effects may be even more harmful to your health.

Since many of the treatments your doctor may be giving you are not meant to actually correct the true cause of your problem, logic says your diabetes will only get worse. You’ll continue to be given more and more drugs until one day your diabetes gets to a point where you need insulin, unless you are already at this *dreaded stage.*

5. The Only Organ In The Body That Is Involved In Sugar Regulation Is Your Pancreas

This is probably the most serious misconception. Sure your pancreas is an important organ in the regulation of blood sugar, but there are other organs that need to be evaluated in order for proper therapy to be applied.

The four main organs that play a role in regulation of blood sugar and therefore play a role in your diabetes are: Your Liver, Pancreas, Adrenal Glands, and Thyroid. When was the last time your doctor evaluated these organs or ran the appropriate tests to find out if they are impacting your disease? Unfortunately I often find that diabetics are actually “victims” of the standard of care.

6. DIABETICS SHOULD EAT ONE WAY

Let me let you in on a little secret. There is no ONE diabetic diet!!! It does not exist. Yet, many diabetics are instructed to follow the same basic and general eating guidelines as the next diabetic. This is **nutritional insanity.**

Diabetics are often told not to eat so much, reduce their calories. Told not to eat late at night.

Instructed to reduce their fat intake, limit red meat, and eat “*whole grains*”. Well let me ask you how is that advice working out for diabetics so far?

A diabetic's diet must be customized based upon their individual needs. If you follow the advice the **diabetic herd** is being given don't be surprised when you get the same results the diabetic herd gets.

Is Your Doctor Doing Everything Possible For Your Condition, Leaving No Stone Un-Turned?

If you answer “No” to any of the following questions below, in bold, your doctor may unknowingly be a road block to you reclaiming your health and living a life that you deserve.

Don't get me wrong your doctor is likely not intentionally holding back information, it's more likely that he or she does not have the information that I have.

- 1. Does your doctor spend enough time with you to answer all of your questions and concerns?** Or does your doctor run late and then rush through your visit? Shoot do you even see a doctor these days?
- 2. Has your doctor provided you with a written individualized treatment plan with clear goals, objectives, and bench marks that can be measured?** Or does your doctor just scribble on a prescription pad each time you have a problem?
- 3. Has your doctor given you specific and individualized dietary guidelines to follow?** Or has your doctor given you the same diet pamphlet that all diabetics get?
- 4. Has your doctor given you a specific exercise program that ensures you are burning fat instead of sugar?** Or has your doctor just given told you to exercise and lose weight?

5. **Has your doctor run every blood test that is important to your health?** Or does your doctor just run what the insurance companies and the “standard of care allow?
6. **Has your doctor ever ordered an adrenal stress index for you?**
7. **Has your doctor ever done a comprehensive digestive stool analysis on you?** Or does your doctor tell you that “everything looks fine”? When you know it’s not!
8. **Has your doctor ever ordered a COMPLETE thyroid panel for you?** Or does your doctor just run one marker (TSH), if that?
9. **If you are male have you ever been evaluated for Andropause?** Or does your doctor tell you it is normal to have low sex drive and erectile dysfunction at your age?
10. **If you are female has your doctor ever ordered an expanded female hormone panel?** Or does your doctor just prescribe hormones to mask your female problems?

If you answered “No” to any or all of the questions **in bold print** then there is a good chance that your diabetes is not being managed properly. You deserve better!!

So What’s The Secret?

If you haven’t figured it out already... Here it is.

There is NO ONE DIABETIC SECRET!!!!

The medical establishment and the pharmaceutical companies would love you to think that all diabetics should be treated the same. They would love you to think that all you have to do is take their *drugs*...for the rest of your natural life!!!

Remember a few pages back I wrote about the importance of understanding why a diabetic is a diabetic? I wrote about the fact that diagnosing diabetes is actually very easy (Heck an 8 year old can do that!).

The Most Important Question Is Why Are YOU A Diabetic?

And guess what? When you run ALL of the necessary tests to determine why a person can no longer regulate their blood sugar you find that **each person has a different mechanism for their diabetes.**

So if each person has a different mechanism for their diabetes...what then does that dictate about what the treatment plan needs to be? I know it's not brain surgery...the treatment plan has to be different. **You need a treatment plan that is *customized* for you as an individual.** A treatment plan that addresses the reasons YOU can no longer regulate your blood sugar. Not a treatment plan that BIG PHARMA wants you to have, so the FAT CATS on WALL STREET can continue to line their pockets with cash.

The point is this...You are not a diagnosis? Yet the medical establishment often designs treatment based upon a diagnosis.

Your treatment needs to be based on YOUR INDIVIDUALITY!

In addition you need a doctor who cares about you and how this disease is negatively impacting your life... A doctor who will spend the time to listen to all of your concerns and really be thorough... A doctor who will *put it all together for you* and take all the guess work out of doing your part.

A doctor that does not just push drugs on you...one that spends countless hours researching the latest and greatest in the treatment of type II diabetes... not just taking treatment *advice from a pharmaceutical sales rep.*

You need a doctor who has not given up on you... A doctor that won't give up until you become free from a life of misery and dysfunction... **You deserve it!!**

If it sounds like an impossibility... then you have likely been brainwashed into thinking this is a death sentence. You have likely been brainwashed by years of **drug commercials** that claim to deliver, but sadly rarely do. If you think you are just destined to suffer the ill effects of diabetes, then you must think again. If you are close to giving up and *throwing in the towel*...

Don't give up HOPE...

The Dissection Of A Soul...

You see, you can loose a leg... you can loose an arm...you can lose your vision, but there is NOTHING like an **amputated spirit.** That's what diabetes can do to you. And the worst part

is you are not alone. Type II Diabetes is amputating the spirit of so many people. People just like you. That is what the drug companies want...they want you to give up hope and become *dependent and subservient* to their products.

I see clients everyday inches away from giving up. Unfortunately I often see diabetics who have in fact given up and they are not even reachable anymore.

Diabetes is a nasty disease ruining the lives of millions of people. A disease once thought to only affect adults is now starting to strike at our young children. And this quite frankly is unacceptable.

What I'm here to do is frankly *offer you a life-line*. Sharing this information with you I think will change your life forever. Give you the power and energy to live life to the fullest again. Before it's too late.

It is *heart breaking* to sit in front of a diabetic who neglected their health for so long...a diabetic who believed in the drug companies too much...a diabetic who thought they had tried everything and now as they sit in front of me I know it is too late. I know their disease has gone too far and done too much damage to ever be able to recover. Don't let this happen to you!

I will take you by the hand and answer ALL your questions...giving you the best possible way to get healthier and stronger.

I don't care if you've been to 100's of other doctors or if you think you have "tried everything" under the sun to no avail. None of that matters.

The ONLY thing that matters... is your *desire* to live a healthy life... a quality life... free of constant monitoring of your blood sugars...constantly having to monitor your diet...always being dependent on "medications"...

All you need is a "burning desire" to be healthy again!

Let me be your guide. I know what diabetics go through. I have been helping diabetics reverse their disease for almost 30 years now and no one can tell me that you are doomed. I KNOW BETTER. I have personally seen many diabetics missing critical information about their condition that changes their overall ability to reverse their condition.

I make sure appointments are scheduled to give each and every one the individual attention they need to get the best possible results. I refuse to be one of the doctors who spends only 3-5 minutes with each client. Quite frankly that common practice makes my blood boil.

So please... if you are at all interested in seeing if you qualify to be a client of mine, and see if this is finally the one thing you've been waiting for... the one thing you've been dreaming about... do it now. **Don't put yourself on the wrong end of your TO DO LIST!**

**How Would You Like To Find Out If You Qualify For This
Amazing Type II Diabetes Reversal Program?
Absolutely Free! (NO GIMMICKS!)**

Here is The Qualification Process...

- **A phone consultation with me, Dr. Dale Kelly, to discuss your problems and answer ALL your questions. I will thoroughly explain the program as well as my clinical model.**
- **At the end of that conversation, I will determine if I think I might be able to help you and discuss the next step in the process with you.**
- **You determine if you would like to move forward.**

Total Value (\$197)

Completely FREE!

**Call (775) 358-6824 and Schedule Your
Type II Diabetes Qualification Consultation Now!**

**Now Give Me A Minute
To Speak “Off The Record...”**

You've spent the last half-an-hour or so reading this guide. 16 pages to this point. You **MUST** be seriously interested in what I've said and what my **Type II Diabetic Reversal Program** can do for you. Finally finding a completely *risk-free* way to see if everything possible is being done for your disease... making sure that no stone is left unturned must be exactly what you've spent so many sleepless nights dreaming and praying about.

Nevertheless, many diabetics never take the next step. Many diabetics never make the call and reach out for help. They back down when the potential answer to their prayers may be just a painless phone call away. The information you have in your hands right now and the information I have waiting for you at my clinic is *utterly useless* without YOUR ACTION.

Why do so many people give up without at least giving themselves a chance? I think many (maybe even you) have been taken advantage of... played for a sucker more than once... given up hope... Your fears preyed upon by the pharmaceutical ads and doctors who have not listened to you. By this time you are a little more than “gun shy.” I understand and can’t blame you. **This is why I am giving you my time for FREE.** I feel it is my obligation to consult with you so you can really understand how you could be finally helped.

Many diabetics only have a *sliver of hope* left. They are really close to throwing in the towel and giving up. **DON’T GIVE UP!** If you can muster just enough hope to meet with me you will see that reversing your diabetes, getting off medication, and beginning to feel better is a real possibility. You will NOT be taken for a fool or dismissed.

Now the only question left is... will you try?

Remember When...

If you can think back right now to a time before you first began having diabetic symptoms and that fateful day when an official diagnosis of diabetes hit you like a ton of bricks. Imagine how wonderful you felt without all the hassles and complications of being a diabetic. Always having to watch what you eat... Being told to exercise even though you had no energy to do so... Always having to monitor your blood sugar and insulin levels for fear of a serious health event... Feel how you felt...see what you saw... smell what you smelt...remember the zest you used to have for life before you came down with this wretched disease... .It feels wonderful doesn’t it?

Kinda like that feeling that engulfed your entire body when you first fell in love. Imagine how that would feel again... to have the energy and incredible connection again to life... with your spouse, your children, your family — and if you could look back on today, sitting here reading this guide, as being the beginning of that — the beginning of the happy, fulfilled, healthy life you’ve always wanted. If you can feel that **RIGHT NOW** and want that feeling to continue, you probably should, and ought to pick up the phone and schedule your consultation **RIGHT NOW!**

Here’s What To Do Next...

So, if you’re really serious about ending your diabetic suffering, **call (775) 358-6824 now!**

The consultation is Absolutely FREE with no further obligation!

Disclaimer: All free consultations are subject to availability based upon Dr. Kelly's schedule. Should he run out of space for his diabetic reversal program you will not be able to schedule an appointment until he opens his schedule again to take new clients.

Why go another day with diabetes eating away at your life, when the possible answer to your diabetic woes may be right here, right in front of you? How would you feel, finding out years from now, the potential answer to your problems was right in front of you all along... and you let it slip through your fingers?

Sincerely,

Dr. Dale Kelly

P.S. One Last Thing — It's Really important — Please remember... I cannot possibly accept everyone into my program. There are not enough hours in the day. I could easily get over-booked very quickly. If that happens, I will have to stop the FREE offer. I wrote this guide because I honestly want to make a difference for as many type II diabetics as possible. And I'm always amazed at how quickly and easily someone's life can **completely turn around.**

P.S.S. The decision you make right now by either picking up the phone and scheduling your free consultation or throwing out this guide may have a drastic effect on the rest of your life. It may be the difference between enjoying the rest of your life and doing all the things you want to do OR suffering on the sidelines of life as this disease takes over. This decision is very important and I hope you make it wisely.

Call (775) 358-6824 to schedule your FREE TYPE II DIABETES qualification consultation. Remember, there is absolutely no further obligation.
